

THE CONTENT ENGINE

One overview of every automated work path: the daily blog and reel pipeline, the reel render and social handoff, and the Book Factory. Arrows show what feeds what. Every card names its owner and, where fixed, its clock time or timeout.

- **Nick** — business owner, final approval
- **Codex (Robert Paulson)** — architecture, gates, deploy safety
- **Claude** — editorial, research, QA specialist
- **Gemma / Hermes** — local LLM draft workers, untrusted until validated
- **Deterministic** — scripts, no model in the loop

DAILY AUTOMATION CLOCK

Three LaunchAgents chain the day. All times PDT.

23:00

RESEARCH QUEUE PREP

com.nick.gemma-research — overnight topic + research queue for tomorrow's post.

● GEMMA

09:00

BLOG + REEL PIPELINE

com.nick.daily-blog-reel — writes, gates, and auto-publishes the day's post (BLOG_AUTO_DEPLOY=1).

● CODEX-OWNED RUN

11:00

REEL RENDERS

com.nick.render-m reels — renders reels registered posts, comr only. Max 2 per run.

● DETERMINISTIC

Also daily: SPOT_KV snapshot cron feeds the live silver/gold spot API used by every silver post, and the Codex Book Factory owner loop (below) advances one safe step.

PATH 1 — BLOG POST PIPELINE (BUILD-POST.SH)

Daily run is Hermes takeover (HERMES_TAKEOVER=1, CLAUDE_ENABLED=0):
brain stages fall to local Gemma, guarded by deterministic validators.
Shield cards 🛡 are gates that can block.

Race rule: manual deploys near 09:00 PDT can be superseded by the cron's deploy — verify yours is newest. **Publish means:** posts.json verified + commit + push + deploy + curl 200. Push alone is not publish.

PATHS 2 & 3 — REEL PRODUCTION · BOOK FACTORY

REEL PATH (FROM T9 REEL-DATA)

SCRIPT + VALIDATE

reel-script.md (long-form 180-240s, ends ## QUESTION) → parse-script → validate-reel. Errors block TTS and render.

● CLAUDE SCRIPT

● GATES

TTS + REMOTION RENDER

Chatterbox voice (Nick's reference) → Remotion 4.0.479, 1080×1920, layout-utils text fitting, chart segment when ## chart present. Timing rule: words ÷ 2.5 + 2s minimum window.

● DETERMINISTIC

🛡️ VERIFY + APPROVE

ffprobe duration, frame inspection, caption spot-checks. Commits local only — no push, no deploy from the reel pass.

● NICK APPROVAL

BUFFER HANDOFF

social:buffer:youtube:media (≤179s, ≤25MiB) · social:buffer:x:media (135s) · social:pack. MP4s ship via wrangler working tree, git-ignored by design.

● CODEX + NICK

BOOK FACTORY (DAILY OWNER LOOP)

RESEARCH TITLE

Public-domain candidates registered in book-factory.mjs. Currently: 3 titles ready-for-KDP, 2 blocked at rights.

● CODEX LOOP

🛡️ RIGHTS GATE

Title-specific U.S. public-domain evidence with citations required. 1936/37 candidates stay blocked until documented.

● NICK REVIEW

ADAPT + ASSEMBLE

Chapter-by-chapter rewrite (originals preserved) → back-cover-sample gate → assemble-print-master. npm run test:book must pass.

● CLAUDE EDITORIAL

● CLI GATES

READY FOR KDP

Owner loop advances one safe step per day and stops at rights, review, or packaging gates. Active title: *The Richest Dev in the Valley* (Babylon adaptation).

● NICK PUBLISHES

STANDING RULES

Push permission. Pipeline may push *content commits only* to Fuseddistribution main. Non-content changes, force pushes, reel deploys: ask Nick or Codex.

Never `git reset --hard` in the Fuseddistribution tree. Revert or soft-reset only; the live site doubles as the HTML backup.

Gates are law. Claude never replaces or bypasses deterministic gates. QA-failed artifacts go to `.workflow-blocked/`, never to `public/`.

Verify with cache-buster. Post-deploy curl needs `?cb=$(date +%s)`; plain curl can serve a stale CDN copy.

No fabricated numbers. Every chart value must appear verbatim in verified sources; every draft needs 3+ comparable sourced stats or a custom graphic — zero graphics is a QA failure.

Copy voice. No em-dashes, no hyphenated words, no AI buzzwords. Plain first-person Fused tone.
